

Token authentication is enabled

If no password has been configured, you need to open the notebook server the URL, or paste it above. This requirement will be lifted if you [enable a password](https://jupyter-notebook.readthedocs.io/en/stable/public_server.html) (https://jupyter-notebook.readthedocs.io/en/stable/public_server.html)

The command:

```
jupyter notebook list
```

will show you the URLs of running servers with their tokens, which you can use in your browser. For example:

```
Currently running servers:
```

```
http://localhost:8888/?token=c8de56fa... :: /Users/y
```

or you can paste just the token value into the password field on this page.

See [the documentation on how to enable a password](https://jupyter-notebook.readthedocs.io/en/stable/public_server.html) (https://jupyter-notebook.readthedocs.io/en/stable/public_server.html) in place of token if you would like to avoid dealing with random tokens.

Cookies are required for authenticated access to notebooks.

Setup a Password

You can also setup a password by entering your token and a new password
